CAREER OBJECTIVE

Second-year BSc (Hons) Computing student at Itahari International College with hands-on experience in full-stack MERN development, Python scripting, and database design using MySQL and MongoDB. Completed multiple independent projects solving real-world problems in inventory management and media conversion. Seeking a software development internship to deepen technical expertise, contribute to production-level products, and grow under experienced engineering mentorship.

EDUCATION

BSc (Hons) Computing *2024 – 2027 (Running)*

Itahari International College | London Metropolitan University | Sundarharaincha-04, Dulari, Morang, Nepal

+2 in Science Stream *2024 – 2027 (Running)*

Sukuna Secondary School | Sundarharaincha-10, Biratchowk, Morang, Nepal

PROJECTS

MeroByapar — Web-Based Inventory Management System *2025-2026*

Stack: MongoDB, Express.js, React.js, Node.js (MERN)

- Engineered a full-stack web application enabling small business owners to manage products, stock levels, and sales records in real time, addressing the lack of affordable inventory tools in the local market.
- Designed a RESTful API backend with Express.js and MongoDB to handle product CRUD operations, ensuring consistent data integrity across concurrent sessions.
- Built a responsive React.js dashboard providing visual stock summaries and low-inventory alerts, reducing manual tracking effort for shop owners.

Gallery — Beauty Products Inventory System *2024*

Stack: Python, CLI (Command-Line Interface), MySQL

- Developed a Python-based CLI application for managing inventory of beauty products, enabling category-based filtering, stock updates, and report generation without a graphical interface.
- Integrated MySQL for structured data storage, implementing parameterized queries to prevent SQL injection and maintain data accuracy across multiple product categories.
- Designed the application architecture for single-user offline use, prioritizing simplicity and reliability for non-technical beauty salon operators.

ConvertIT — Video to Audio Converter *2026*

Stack: Python, Flask

- Built a lightweight Flask web application allowing users to upload video files and extract audio tracks, solving the common need for format conversion without third-party software.
- Implemented server-side file handling and conversion logic using Python, supporting multiple input formats with automatic cleanup of temporary files post-conversion.
- Designed a minimal, user-friendly upload interface ensuring the tool was accessible to non-technical users with no configuration required.

SKILLS

Soft Skills: Problem-Solving, Team Collaboration, Adaptability, Effective Communication, Time Management, Dedicated
Languages: Python, JavaScript (ES6+), Basic Java
Frontend: React.js, HTML5, CSS3, Tailwind CSS
Backend: Node.js, Express.js, Django, Flask, REST APIs
Databases: MongoDB, MySQL
DevOps & Tools: Git & GitHub, Basic Linux, Vercel, Render, Cloudflare, Vs Code, Postman
